

Photoshop 6

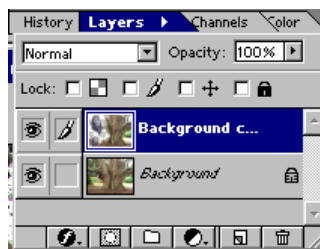

Montage

By drag

1. Open montage base image and image from which a selection is to be copied to the base image
2. Select window, tile to display both images on screen
1. Make a selection from the image to be copied and move it into the base image
4. The image from which the selection was made can now be closed
5. Select edit, transform and reduce the image in size to suit the montage

By clone

1. Open montage base image and image from which a selection is to be copied to the base image
2. Select window, tile to display both images on screen
3. Make a copy of the background image so as not to destroy the base image
4. Select the clone stamp tool and clone the required portion of the image into the base image
5. Using the eraser tool remove unwanted portions of the cloned image
6. With this method if the image required is to be smaller than the original then the image must be reduced to the required size prior to cloning
