

Photoshop 6

Montage

Clipboard and Paste into

Creating a selection in the image to be copied and pasting it into the base image creates a layer and a mask automatically

Use of a suitable montage technique enables the selection of the most significant method of creating the desired effect

1. Open montage base image and image from which a selection is to be copied into the base image
2. Select window, tile to display both images on screen
3. Make a selection from the image to be copied and select edit, copy
4. Make a selection in the base image and select edit, paste into
5. Select edit, transform, scale and reduce the image in size to suit the montage
6. Use the eraser tool to remove unwanted portions of the copied image
7. Use the move tool to position the copied image within the base image
